Platform guide

Record a sound, put it on the map, and share it. Phone recordings are welcome.

Features

Record: Record or upload a sound on your phone.
Pin: Place it on the map, the real spot, or a place it belongs to.
Explore: Listen to sounds other people have pinned around the world.
Collections: Group recordings around a project, place, or theme.
Soundscapes: Layer existing AudioSpaces into a mix.
Radio: Tune in, or make a show from sounds on the platform.

How to start

1. Download AudioSpaces on iOS or Android.
2. Open the app and register.
3. Go to Explore.
4. Search for your collection, if you have one.
5. Tap Add AudioSpaces, then Create New Recording.
6. Record, add a title, then tap Upload.

Recording tips

- Don't cover the mic, and step out of strong wind.
- Get close to quiet sounds, and listen back before you leave.
- If you don't like it, record again, you can't crop later.
- Phone recordings sit alongside professional files.

Files

- Uploads: m4a, wav, mp3, aac, aiff, flac, ogg, and similar, under 100 MB.
- Phone recordings are stored as AAC M4A.
- Collections can be public, open, closed, or managed.

Rights

- You keep copyright in what you upload.
- Uploading grants AudioSpaces a licence to use it.
- Don't upload other people's music or archives without permission.
- Use a broader location if an exact pin could put someone at risk.
